

EASYLINK FAXLAUNCHER

Easylink FaxLauncher is a program that allows users to send faxes from their computer to a fax machine. The program will install a FaxLauncher printer in the user's printer list and when you need to fax, you select the FaxLauncher printer and then type in the phone number that will be receiving the fax.

FaxLauncher is a subscription service. Each client that has this software will be charged \$3 a month to use the service for outbound faxes. This includes 20 outbound pages at no cost. After the user has met this boundary, they will be billed \$.13 per outgoing page for the remainder of the month. If the client would like the ability to receive inbound faxes, the charge is \$3.50 a month and includes 50 inbound pages at no cost. After the client has met this boundary, they will be billed \$0.08 per incoming page for the remainder of the month. Therefore, if the client would like both inbound and outbound fax capability, the base charge per month for their account will be \$6.50.

If a client or agency would like to sign up for FaxLauncher, please submit a work ticket to "Automatic Help Desk Response" to start the process.
